

Charles Darwin.

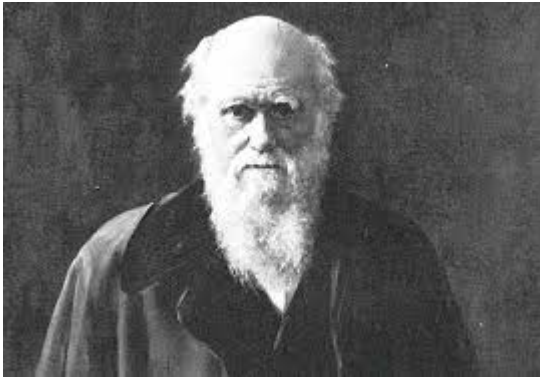

12.2.1809 - 19.4.1882

Introduction

Charles Robert Darwin was born on the 12 February 1809 and died 19 April 1882 .He worked on a theory for 2 years.

Charles was born in Shrewsbury in England .At the age of 16 he studied medical at Edinburgh University.

Evolution

Evolution is a great piece of science it is a slow process that changes animals and plants. Charles Darwin's theory is backed up by lots of scientist over the world but some people do not believe in this theory. Charles Darwin's theory has been around for 150 years.

Charles's adventures

To find out more about Charles Darwin's theory of evolution, Charles went on an adventure on the Beagle (a boat).

The Beagle is remembered today because of its journey with Charles Darwin.

This is the Beagle →

where did he go on the Beagle?

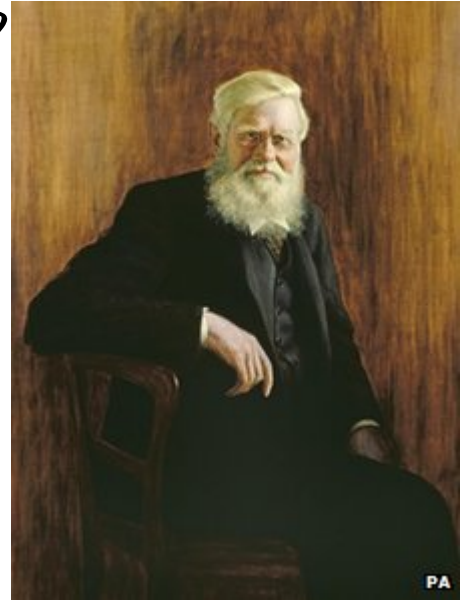

Charles Darwin went on the Beagle's two year survey of south America. The ship left on the 25 september
This is a map of where it went

Who helped Charles

Charles Darwin discovered a theory (of evolution) but he done this with help from A man called Alfred Wallace.

Alfred Wallace told Charles Darwin about his theory and wrote about evolution.

facts on Alfred Wallace

Alfred Russel Wallace was born 8 January 1823 and died 7 November 1913 at the age of 90.

His mum was Mary Anne Greendell, his father was Thomas vere Wallace .

He helped Charles Darwin with the theory of evolution.

Conclusion

Charles Darwin went to university when he was 16 and learnt about theories of evolution he then used that knowledge to discover that Evolution was how we were made. He then gave this theory out to the world and became famous for it.
